Subject Description Form

Subject Code	FSN3417 (ABCT3417)
Subject Title	Life Cycle Nutrition
Credit Value	3.0
Level	3
Pre-requisite / ~~Co-requisite/~~ ~~Exclusion~~	Principles of Nutrition
Objectives	The subject is intended for students to have an in-depth study of the nutritional requirement of individuals at different life stages. The physiological changes during growth and development as well as aging will be studied. The nutritional needs of high-risk population at different life stages will be identified.
Intended Learning Outcomes	Upon completion of the subject, students will be able to: a) have a deeper understanding of the physiological changes during human development and aging b) identify the nutritional needs of individuals or population at different life stages c) appreciate the role of nutrition in human development and health maintenance throughout the life cycle. d) actively participate in identifying nutrition-related issues associated with different life stages
Subject Synopsis/ Indicative Syllabus	<u>Nutritional Needs from Conception to Lactation</u> Reproductive physiology Adolescent pregnancy Nutritional requirement before conception Nutritional requirement during pregnancy Issues of breastfeeding: maternal diet, medical contraindication Use of infant formula <u>Infant Nutrition</u> Growth and development changes during infancy Nutritional needs of infants Feeding for infants Common nutritional issues and concerns in infancy

<table>
<tr>
<td></td>
<td><u>Childhood Nutrition</u>
Growth and development changes during childhood
Nutritional needs of toddlers and preschoolers
Nutritional needs of school-age and preadolescent children
Feeding and physical activity during childhood
Nutrition-related disorders during childhood

<u>Adolescent Nutrition</u>
Growth and development changes during puberty
Health and nutrition-related behaviors during adolescence
Nutritional needs and physical activity during adolescence
Chronic health issues in adolescents
Nutrition for adolescent athletes

<u>Special Topics in Adult Nutrition</u>
Nutrition and chronic disease prevention
Physical activity and weight management

<u>Elderly Nutrition</u>
Physiological changes in elderly
Nutritional Requirement of elderly
Nutrients and Drug Interactions
Elderly at risk</td>
</tr>
<tr>
<td>Teaching/Learning Methodology</td>
<td>The basic contents of this subject will be presented with the aid of lecture notes, videotapes, blackboard platform and other teaching tools. For tutorials, students will participate in small-group discussions to explore the nutritional concerns of individuals at different life stages. Students are also expected to study reference materials distributed in class, from the library or other sources (e.g. newspaper and magazine clippings, and information available on the Internet). Guest speakers will also be invited to deliver seminars on current topics related to nutrition and human development.</td>
</tr>
<tr>
<td>Assessment Methods in Alignment with Intended Learning Outcomes</td>
<td>

	<table><tr><td>4. Final examination</td><td>50%</td><td>√</td><td>√</td><td>√</td><td>√</td><td></td><td></td></tr><tr><td>Total</td><td>100 %</td><td colspan="6"></td></tr></table> Explanation of the appropriateness of the assessment methods in assessing the intended learning outcomes: The continuous assessment comprises of tests, in-class assignments as well as seminar presentation. Assignments will be given to encourage critical thinking among students on current issues related to nutrition at different life stages. Students' performance in active participation in discussion during tutorial sessions will be assessed. Seminar presentation will be assessed based on their abilities to gather, analyze and organize relevant information and their abilities to orally present the information in a logical manner. Both test and the final examination will be used to assess the knowledge acquired by students and their ability to apply such knowledge.
