

Subject Code	AF5203
Subject Title	Contemporary Issues in Accounting Information Systems
Credit Value	3
Level	5
Normal Duration	One Semester
Pre-requisite / Co-requisite/ Exclusion	None
Objectives	This subject helps students use the relevant conceptual IT frameworks to evaluate the functionality and effectiveness of accounting information systems (AIS), and to analyze the contemporary security and control aspects of such systems (Programme Outcome 1). This subject is especially useful to those students who are pursuing a career as a systems accountant or an IT auditor.
Intended Learning Outcomes	Upon completion of the subject, students will be able to: (a) obtain the knowledge required to function as a systems accountant; (b) apply the knowledge of management support systems to accounting and related areas; (c) analyse the current development of enterprise-wide systems and their contribution to business process reengineering; (d) apply well-known systems development methodologies for AIS implementations; (e) evaluate and apply business intelligence software; (f) evaluate the accounting controls and security measures in AIS And (g) experience some real SAP S/4 Hana processes and transactions.
Subject Synopsis / Indicative Syllabus	Fundamental concepts of AIS Contemporary Enterprise Resource Planning systems (ERP). AIS application to major transaction cycles. The Revenue Cycle. The Expenditure Cycle. The Financial Reporting Systems. Management decision support systems and Business Intelligence (BI) Contemporary systems development methodologies for AIS. Software development life cycle. Prototyping. End-user Development Ethics, Fraud and IT controls. Hands-on visualisation software – Power BI and SAP S/4 Hana Application of blockchain, XBRL, artificial intelligence and other

	emerging technologies in Accounting Information Systems								
Teaching/Learning Methodology	The three-hour seminar per week will be used by the lecturer for discussing the various contemporary AIS concepts. Coursework assignments will be used to reinforce students' learning. Students are expected to play an active role to interact with the lecturer and classmates.								
Assessment Methods in Alignment with Intended Learning Outcomes	Specific assessment methods/tasks	% weighting	Intended subject learning outcomes to be assessed (Please tick as appropriate)						
			a	b	c	d	e	f	g
	1. Class participation	15%	✓	✓	✓	✓	✓	✓	✓
	2. Group project	15%	✓	✓	✓	✓	✓	✓	
	3. Individual assignment	20%		✓	✓	✓	✓		
	4. Final examination	50%	✓	✓	✓	✓	✓	✓	
	Total	100 %							
	Explanation of the assessment methods in assessing the intended learning outcomes: Class participation: The class participation component encourages students to provide active feedbacks on the subject materials taught each week. This comprises attendance, class discussions and quizzes. Group project: The group project requires students to apply system development methodologies in the selection of information systems. Individual assignment: To reflect the significant technology content in this subject, 20% of the overall weighting of this subject is based on individual assessment concerning technology-related knowledge. Final examination The final examination is a three-hour examination which comprises cases / problems relating to all the learning outcomes.								

Student Study Effort Expected	Class contact:	
	▪ Seminars	39 Hrs.
	Other student study effort:	
	▪ Studying subject materials/reference books and doing assignments	78 Hrs.
	Total student study effort	117 Hrs.
