1. Assignments on personal applications	35%	--																
2. Online/in class Learning Participation	20%	--																
3. Quizzes	20%	--																
4. Discussion		25%																
Objectives	By the end of the course students should be able to: 1. identify the major fields of study and theoretical perspectives within psychology. 2. comprehend essential theoretical and empirical knowledge of psychology to analyze the indigenous and global trends/developments in major areas of psychological investigations. 3. participate in psychological experiments and engage in active learning. 4. develop critical thinking skills and apply the acquired psychological concepts and theories in daily lives and or relevant professional practice.																	
Intended Learning Outcomes <i>(Note 1)</i>	Upon completion of the subject, students will be able to: a. Identify the different conceptual approaches to human behaviour. b. State the major development stages of the life span and recognize the specific issues (e.g. physical, emotional, cognitive) associated with the different stages. c. Communicate their comprehension of the major psychological phenomena and relate how these take place within themselves and others; particularly perception, learning, motivation, stress and coping, emotions and personality, health and social psychology. d. Recognize the specific management needs and problems that are relevant to nursing profession. e. Apply communication and interpersonal skills. f. Recognize the dynamics associated with health settings and fostering greater efficiency in psychology and nursing care.																	

Subject Synopsis/ Indicative Syllabus (Note 2)	1. The science of psychology Discovering Psychology: is Psychology a science? Psychology, pseudoscience, and common sense - Historical foundations (Structuralism, Functionalism, Gestalt, Behaviorism) - Current perspectives (Biological approach, Cognitive approach, Behavioral approach, Psychoanalytic approach, Humanistic approach, and Cross-Cultural approach) - Critical and scientific thinking in psychology - Research methods in psychology - From the laboratory to the real world 2. The biological perspective Stimulating your brain: A tour of the brain and the nervous system. - The Nervous system - Communication in the Nervous system - Mapping the brain - A tour through the brain - Brain and behavior - Contemporary issues in brain research 3. Psychological disorders/psychological therapies Improving your mental health: How do you distinguish between normal and abnormal behaviour. - Classification of psychological disorders - Major psychological disorders - Biomedical and psychological approaches to therapy for mental disorders - Treatment evaluation and prevention strategies 4. Cognition: thinking, intelligence and language Shaping your thoughts: is human thinking unique? - Thought: Using what we know - Reasoning rationally - Barriers to reasoning rationally - Intelligence - The origins of intelligence & modern intelligence 5. Memory Sharpening your mind: Do you want to improve your memory? - Reconstructing the past - Memory and the power of suggestion - In pursuit of memory - The three-box model of memory - How we remember - How we forget - Autobiographical memories 6. Development across a lifespan Are adults prisoners of childhood? From conception through the first year - Cognitive development - Moral development - Transition into adolescence, adulthood & the third age 7. Learning Learning your environment: <i>What can you do to modify your own and other's behavior?</i> - Classical conditioning in the lab: Pavlov's dog - Classical conditioning in real life - Operant conditioning in the lab: The Skinner box - Operant conditioning in real life - Learning and the mind
---	--

	8. Emotional, stress and health (combined 11,12 &13) Managing your emotions: <i>Can revealing your unresolved emotions help your health?</i> - The nature of emotion - Emotion and culture - The nature of stress - Stress and emotion - Emotions, stress, and health: How to cope Motivational theories and concepts 9. Personality Understanding yourself: <i>Is personality a convenient myth?</i> - Freud and psychodynamic theories - The neo-Freudians theories of personality - Behavioral and social cognitive approach to personality - Traits and the empirical approach to personality - Humanistic perspective - The genetic contribution - Objective and subject assessment of personality 10. Social psychology Looking around the world: Is it the person or the situation? Social thought: Thinking about others - Social influence: Conformity, compliance, and obedience - Social relations: Interacting with others - The anonymous crowd - Us versus them: Group identity - Stereotyping, prejudice, and discrimination 11. Stress and Coping The nature and responding to stress Factors moderating the impact of stress Health-impairing behaviour and coping to stress 12. Introduction to the psychology of health Foundations of health psychology Behaviour and chronic disease Behavioural health 13. Advancements in psychological research - Contemporary research methods in modern psychology - Replication crisis and open science - Harnessing the power of big data and artificial intelligence
Teaching & Learning Methodology <i>(Note 3)</i>	<u>Lecture</u> The learning approach will be based on experiential and discovery learning in order to help students acquire a more personal understanding of the subject and related topics. Experiential learning demands more of students' reflective thinking, such as on their own experienced issues. Both lectures and lecture notes will be designed to maximize students' participatory and discovery learning. Students are required to discuss assigned materials which is aimed to develop self-discovery and to generate intellectual discovery on some fundamental concepts and principles of psychology and their application in clinical practices.

	Explanation of the appropriateness of the assessment methods in assessing the intended learning outcomes:							
	<u>Assignments on personal applications</u> Students are expected to reflect on their learning and understand its application in their daily lives by writing a reflective journal; bringing together theoretical knowledge learnt in lectures and real-life experiences provides an opportunity to gain clarity of understanding and self-knowledge.							
	<u>Online/in class Learning Participation</u> Online learning participation is based on continuous online assessment; which includes: online readings, online contents usage and classroom participation. Online multiple choice practice quizzes are used to assess the topics taught after each lecture. Participation in learning activities including preparation by reading class materials online and in-class engagement through responses via Students’ Response System (SRS) will reflect students ongoing progress and engagement in class learning activities.							
	<u>Quizzes</u> Multiple choice quizzes are used to assess students’ learning at the (recall / comprehension / application / analysis) level(s), making them adaptable for a wide range of content and learning outcome. • The grade is calculated according to the percentage assigned; • The completion and submission of all component assignments are required for passing the subject							
	<u>Discussion</u> Students are expected to participate in online discussions, which are similarly reflective in nature. They force students to read other perspectives and carefully consider a response. The use of discussion boards is used as an active method of learning.							
Student Study Effort Expected	Class contact:							
	▪ Lecture					39 Hrs.		
	Other student study effort:							
	▪ Self-reading & instructional videos viewing for class preparation					13 Hrs.		
	▪ Assignments (Reflective journals, forum discussion)					48 Hrs.		

	Preparation for quizzes	20 Hrs.
	Total student study effort	120 Hrs.

Note 1: Intended Learning Outcomes

Intended learning outcomes should state what students should be able to do or attain upon completion of the subject. Subject outcomes are expected to contribute to the attainment of the overall programme outcomes.

Note 2: Subject Synopsis/ Indicative Syllabus

The syllabus should adequately address the intended learning outcomes. At the same time over-crowding of the syllabus should be avoided.

Note 3: Teaching/Learning Methodology

This section should include a brief description of the teaching and learning methods to be employed to facilitate learning, and a justification of how the methods are aligned with the intended learning outcomes of the subject.

Note 4: Assessment Method

This section should include the assessment method(s) to be used and its relative weighting, and indicate which of the subject intended learning outcomes that each method purports to assess. It should also provide a brief explanation of the appropriateness of the assessment methods in assessing the intended learning outcomes.
