| <b>Subject Title</b>                                   | Integrated Circuit Processing and Laboratory                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
| <b>Credit Value</b>                                    | 3                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
| <b>Level</b>                                           | 5                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
| <b>Pre-requisite /<br/>Co-requisite/<br/>Exclusion</b> | Nil                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
| <b>Objectives</b>                                      | To make familiar with the microfabrication concepts, materials, and methods that are typically used in a cleanroom especially for the fabrication of integrated circuits (ICs).                                                                                                                                                                                                                                                                                                                                                                                                                             |
| <b>Intended Learning Outcomes</b>                      | <p>Upon completion of the subject, students will be able to:</p> <ol style="list-style-type: none"> <li>understand the basic knowledge of different classes of cleanrooms, the working procedures, and the safety aspects;</li> <li>understand the principles behind the design and fabrication of IC devices and systems and the effect of processes on their performance;</li> <li>have a thorough understanding of the available fabrication technologies; and</li> <li>experimentally carry out a simple process recipe using the most common microfabrication techniques for IC processing.</li> </ol> |
| <b>Subject Synopsis/<br/>Indicative Syllabus</b>       | <ul style="list-style-type: none"> <li>Physical principles of IC fabrication processes;</li> <li>Surface preparation;</li> <li>Thermal processes;</li> <li>Chemical and physical vapor depositions;</li> <li>Resist coating and removal;</li> <li>Mask fabrication and advanced lithography;</li> <li>Etching techniques;</li> <li>Process characterization;</li> </ul>                                                                                                                                                                                                                                     |
| <b>Teaching/Learning Methodology</b>                   | In order to stimulate and motivate the students' interest in the study of cleanroom microfabrication technologies for ICs, several cleanroom microfabrication experiments will be offered to the students for them to gain hands-on experience on the growth of SiO <sub>2</sub> thin film by thermal oxidation, CVD, PVD, lithography, patterning and etching for simple ICs. These proposed practical examples will demonstrate the importance of microfabrication in the forefront of modern microelectronics circuits.                                                                                  |

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |                                                                                                                        |             |                                                                                |          |   |   |

| <p><b>Continuous assessments</b> consist of assignments and mid-term tests. These will strengthen the students’ basic knowledge and the analytical skill to solve the problems related to cleanroom microfabrication technologies as well as the cleanroom experimental skills on microfabrication.</p> <p><b>The report and presentation</b> include a written report and an oral presentation. These will review the students’ hands-on skills of some experiments.</p> |                                                                                                                        |             |                                                                                |          |   |   |
