

Subject Description Form

Subject Code	EE3010 / EE3010A / EE3010B
Subject Title	Summer Practical Training
Credit Value	3 training credits (not counted towards GPA)
Level	3
Pre-requisite/ Co-requisite/ Exclusion	Nil
Objectives	1. To provide students with exposure to industrial and engineering working environments before they complete their program of study. 2. To broaden their understanding of the engineering program from a broader perspective. 3. To enrich students' all-rounded and global learning experience.
Subject Intended Learning Outcomes	Upon completion of the subject, students will be able to: a. Present work experiences in a written report. b. Demonstrate an awareness of practical contexts relevant to their field of study. c. Acquiring new knowledge and skills relevant to their field of study. d. Appreciate the contributions of others in the industrial or engineering sector. e. Demonstrate good working practices, showing maturity and a sense of responsibility.
Subject Synopsis/ Indicative Syllabus	INDICATIVE CONTENT To ensure students gain valuable experience, the summer practical training must be carefully selected well-organized and related to the program of study. Students are expected to complete a minimum of 6 weeks of full-time (or equivalent) industrial training. Prior to starting their placement, students must outline the expected learning outcomes and, upon completion, submit a report detailing their work, learning outcomes, and achievements. Consequently, the following learning support activities will be conducted. (I) Orientation Students should begin their preparatory work at the start of the second semester, typically in their third year of study. An orientation will be provided covering the following: ◆ Basic skills for undertaking practical training ◆ Planning and scheduling for the successful completion of assessment tasks ◆ Information on searching for local or non-local work-based employment and attachments (II) Progress Monitoring During the training period, students should maintain a training journal to document their progress. The journal may include: ◆ Location and title of the internship: Summarize where practical training took place and how the internship fits into the overall structure of the host organization. ◆ Responsibilities: Describe the actual responsibilities undertaken during the internship. ◆ Skills and Knowledge: Detail the skills and knowledge required to fulfill the work responsibilities. Explain how these skills and knowledge evolved

	throughout your work experiences and discuss their relevance to your academic studies and future goals. ◆ Outcome: Describe your placement experiences and major achievements, providing concrete examples. (III) Learning Evaluation Upon completing their practical training, students are required to submit a report detailing their work experience. This report offers an opportunity for students to reflect on the knowledge and skills they gained at the work site. The framework of the report should include: ◆ A summary of the report. ◆ Detailed description of activities carried out during the placement, minimum 6 pages. ◆ A self-reflection: Students articulate their thoughts on each section in the report, as well as on the report as a whole. Through this reflective process, students draw connections between their work experience and university-based learning, construct new knowledge, and become more aware of themselves as learners. ◆ Conclusion: After reflecting on their workplace experience, students set goals and directions for future learning. ◆ Examples of valid industrial placement ◆ Full-time placement in a suitable organization, locally or overseas, for six weeks ◆ Assisting in PolyU activities that have an external collaboration or service component such as, Innovation and Technology Fund projects, high-level consultancy projects, collaborative research projects that were undertaken with external organizations, jobs undertaken by the Industrial Centre as a service for an external organization. ◆ Placement within the IAESTE (International Association for the Exchange of Students for Technical Experience) Programme, in which the student is attached to a workplace abroad during the training.																										
Teaching/Learning Methodology	Through on-the-job work placements, students learn to connect classroom theory with practical workplace applications, prepare themselves for the realities of workplaces and develop their generic skills in a real working environment. In addition to the orientation, students consult with teaching staff on a one-to-one basis. <table><tr><th rowspan="2">Teaching/Learning Methodology</th><th colspan="5">Outcomes</th></tr><tr><th>a</th><th>b</th><th>c</th><th>d</th><th>e</th></tr><tr><td>Industrial placement</td><td>✓</td><td>✓</td><td>✓</td><td>✓</td><td>✓</td></tr></table>	Teaching/Learning Methodology	Outcomes					a	b	c	d	e	Industrial placement	✓	✓	✓	✓	✓
