

Subject Description Form

Subject Code	EEE516
Subject Title	Research Project
Credit Value	6
Level	5
Pre-requisite/ Co-requisite/ Exclusion	Having completed or co-taking 6 credits of study
Objectives	The objectives of this subject are to: 1. Give students an opportunity to perform a research project under supervision 2. Summarize the results in a research report and present the results of the project 3. Put into practical effect the research skills acquired during the subject; 4. Work in a specifically defined field to produce a substantial piece of work based on critical analysis, evaluation, independent thought and knowledge contribution.
Intended Learning Outcomes	Upon completion of the subject, students will be able to: a. Demonstrate an understanding of relevant literature in the topic area selected b. Apply knowledge and skills relevant to microelectronics to achieve the objective of the project c. Learn to use new tools and facilities, and to collect and organize new information for the conduction of the project d. Work under the guidance of a supervisor while exercising self-discipline to manage the project e. Develop critical thinking and analytic evaluation skills through planning and implementing a research project, and evaluating the outcome in a systematic way and to a professional standard f. Work with others (team partners, outsource company, technical support staff, etc.) collaboratively.
Subject Synopsis/ Indicative Syllabus	Discuss and finalize the project topic, background study, methodology, expected outcomes, etc., with the project supervisor.

Teaching/Learning Methodology	Supervisors: Students are advised to discuss with potential supervisors for topic formulation and project supervision. Tutorials: Both the supervisor and student should arrange to meet regularly at mutually agreed times. As a guideline, each student is allowed a minimum of ten hours of staff time for individual consultation to obtain guidance in project development. Self-study: Students are expected to study independently, while study groups are actively encouraged. The student will need to be self-motivated and set his or her own goals and schedules as well as monitor the throughout the development of the Research Project. Progress: There are four stages in the preparation of the Research Project: (i) Approval of the outline of the proposed research plan (ii) Approval of the completed draft (iii) Written project report (iv) A poster presentation The students' background and personal experiences and interests form the basis for conducting the research study. To optimize the impact of their research on their organizations, students are encouraged to undertake research with full organizational support. Generally, the Project report covers an area of applied research related to microelectronics technologies. The project report must also contain sufficient evidence of research and original thought to justify its academic standard at the MSc level.																																														
Assessment Methods in Alignment with Intended Learning Outcomes	<table><tr><th rowspan="2">Specific assessment methods/tasks</th><th rowspan="2">% weighting</th><th colspan="6">Intended subject learning outcomes to be assessed</th></tr><tr><th>a</th><th>b</th><th>c</th><th>d</th><th>e</th><th>f</th></tr><tr><td>1. Student Study Effort Expected	Class contact:	0 Hrs.
	Other student study effort:	
	▪ Regular meetings with supervisor, self-study, discussion, report writing and presentation, etc.	210 Hrs.
	Total student study effort	210 Hrs.
Reading List and References	To be determined by supervisors (readings/references are topic related).
