

Subject Code	ENGL4015								
Subject Title	Designing Courses for TESOL								
Credit Value	3								
Level	4								
Pre-requisite / Co-requisite/ Exclusion	None								
Objectives	This subject is designed to help students develop the ability to plan, implement and evaluate English courses for speakers of other languages. The subject seeks to provide students with an informed understanding of the theoretical principles and practical issues involved in developing curricula and materials for proficiency-oriented courses in English for general and specific purposes. It also aims to develop students’ ability to evaluate, adapt and supplement commercially produced TESOL materials and to plan and produce language-learning tasks and activities.								
Intended Learning Outcomes	Upon completion of the subject, students will be able to: Category A: Professional/academic knowledge and skills a. analyse and evaluate curricula reflecting current approaches to the teaching of English to speakers of other languages (TESOL); b. design general- and specific-purpose English courses using their knowledge of the key principles and procedures in TESOL curriculum development; c. critique commercially produced teaching/learning materials (e.g. coursebooks, worksheets, videos, websites) designed for courses in English for general and specific purposes; d. adapt and supplement teaching materials to meet the needs of particular groups of learners; e. produce and justify task-based materials which would supplement a published coursebook or contribute to a resource of standalone materials. Category B: Attributes for all-roundedness f. display critical and creative thinking; g. use a range of strategies for learning autonomously and collaboratively.								
Subject Synopsis/ Indicative Syllabus	● Basic concepts in TESOL course design ● Course planning and design models ● Needs analysis ● Designing and evaluating courses: objectives, outcomes, content selection and organisation, assessment, methods of evaluation ● Materials evaluation: procedures and processes for the selection of materials, in-use and post-use evaluation ● Materials adaptation and supplementation ● Materials design: using authentic materials, developing task-based materials, grading and sequencing tasks								
Teaching/ Learning Methodology	Teaching and learning will be interactive, and students are expected to participate actively both in class and online. Students will be introduced to key principles and procedures in TESOL course and materials development and given the opportunity to analyse and discuss a range of courses and materials. They will also have the chance to create tasks and materials for particular teaching-learning contexts.

	1. Individual teaching demonstration	25%	✓	✓	✓		✓	✓	✓

Learning Outcomes	2. Materials review	25%	✓	✓	✓	✓	✓	✓	
	3. Materials development	50%		✓		✓	✓	✓	✓
	Total	100%							
	Students will be required to complete teaching demonstrations and work on materials review and materials development. The first assessment is an individual teaching demonstration where students will demonstrate a particular pedagogical approach in their lesson. The second assessment, the materials review, is a written assignment where students will analyse and evaluate textbook/published materials that are used as the core component of a course in English for general or specific purposes (e.g., by a secondary school, university language centre) and discuss how the material can be improved or modified. The third assessment, the materials development, will consist of students submitting a written annotated lesson plan to demonstrate their understanding of all the topics and concepts covered in the course and demoing said lesson in class.								
Student Study Effort Expected	Class Contact:								
	• Lectures		39 hours						
	• Seminars		0 hours						
	Other student study effort:								
	• Private study		58 hours						
	• Take-home assignments		29 hours						
	Total student study effort		126 hours
