| <b>Pre-requisite</b>                        | FSN5022 / ABCT5022 Nutritional Assessment<br>FSN5025 / ABCT5025 Nutrition Education and Counselling                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
| <b>Objectives</b>                           | This subject will focus on the practical application of nutrition principles to promote health and prevent disease in various populations. It will introduce nutrition related physiological conditions, with the integration of clinical nutritional interventions. The basic principles of medical nutritional therapy, disease prevention and monitoring of nutritional intervention will be covered to equip students with the knowledge and skills for conducting nutrition consultations.                                                                                                                                                                                                                  |
| <b>Intended Learning Outcomes</b>           | Upon completion of the subject, students are expected to: <ul style="list-style-type: none"> <li>a) Critically evaluate nutrition needs for diverse individuals and groups;</li> <li>b) Integrate nutrition and clinical information to implement evidence-based interventions; and</li> <li>c) Apply nutritional knowledge to reduce the risk of common diet-related non-communicable diseases.</li> </ul>                                                                                                                                                                                                                                                                                                      |

| <b>Teaching/Learning Methodology</b>                                                                                                                                                      | <p><b>Lectures and Tutorials:</b> The fundamental knowledge of the nutritional needs of individuals and groups will be introduced, with specific focus on nutritional alteration and practical considerations in practice. The prevalence, cause, diagnosis, medical and other non-pharmacological management of obesity, diabetes, osteoporosis, thyroid disorders, anaemia, hyperlipidaemia, and cancers will be covered in lectures. In tutorials, a problem-based learning approach will be adopted. Students will be expected to integrate various information about individuals to assess their nutritional status, identify their nutritional needs and/or problems; and develop intervention plans. They will be expected to present and justify their decisions.</p> |             |                                                                                |   |   |
