

Subject Code	MM5861
Subject Title	Advanced Marketing Research
Credit Value	3
Level	5
Normal Duration	1-semester
Pre-requisite/ Co-requisite/ Exclusion	None
Objectives	This course is designed to: • enable students to have a basic understanding of the nature and scope of marketing research problems and the methods used to solve those problems. • enable students to apply rigorous analysis skills, rather than statistic calculation to deal with questions of marketing research and marketing intelligence at a managerial level. • develop students' ability to interpret marketing research findings. This subject contributes to the achievement of the MSc MM Programme Outcome 1 (Understand the principles and practices of management, marketing, and ethics, and develop entrepreneurship to apply theories to solve business issues that are increasingly affected by technologies).
Intended Learning Outcomes	Upon completion of the subject, students will be able to: a. locate and identify information sources relevant to solving marketing problems. b. understand, evaluate and develop comprehensive marketing research plans that align with business objectives. c. apply advanced data analysis using statistical methods and interpret the results for marketing decisions. d. integrate digital tools and analytics into marketing research to enhance decision-making processes.
Subject Synopsis/ Indicative Syllabus	The purpose and Process of Marketing Research Marketing Research Industry; Themes in Marketing Research; Overview of the Research Process. Research Design Types of Research; Types of Data Sources; Measurement in Marketing Research Project and Survey Design, Data Collection and Sampling Causal Designs and Marketing Experiments; Qualitative Techniques for Exploratory Research; Quantitative Techniques for Conclusive Research; Methods of Data Collections; Design Surveys; Sampling Procedures. Data Analysis and Statistical Methods Univariate Analyses; Bivariate Analyses; Multivariate Methods of Marketing Research (i.e., Factor, Cluster, and Analyses of Variance). Interpretation of Analysis Results. Advanced Topics and Preparing the Final Report

Teaching/Learning Methodology	The subject will consist of formal lectures, case study analyses, hands-on workshops, and group projects to achieve the learning objectives and outcomes.							
Assessment Methods in Alignment with Intended Learning Outcomes	Specific assessment methods/tasks	% weighting	Intended subject learning outcomes to be assessed (Please tick as appropriate)					
			a.	b.	c.	d.		
	Continuous Assessment*	100%						
	1. Participation	10%	✓	✓	✓	✓		
	2. Data analysis test	20%			✓	✓		
	3. Individual Case study	20%	✓	✓				
	4. Group project	50%	✓	✓	✓	✓		
	Total	100 %						
	<i>*Weighting of assessment methods/tasks in continuous assessment may be different, subject to each subject lecturer.</i>							
	To pass this subject, students are required to obtain Grade D or above in the overall subject grade.							
Explanation of the appropriateness of the assessment methods in assessing the intended learning outcomes:								
To help students understand both the principles and techniques of marketing research, they will be required to participate in-class discussion, undertake individual and group assignment(s) and attempt a data analysis test. These in-class discussion, individual and group assignment(s) will help students have an in-depth understanding of advanced marketing research tools and methodologies., they together with the data analysis test and group project will further help students enhance advanced analytical skills and cutting-edge research techniques to engage in practical research projects that simulate real-world market analysis and strategic planning.								
The different assessment methods are further detailed below:								
Participation: Attendance and active involvement in class discussions are the two assessed areas. For students to derive any real benefit from this course it is absolutely essential that they come prepared to seminars and computer workshops and participate in the activities.								
Individual Case Study: Each student will read the real-world case and answer relevant questions to assess how well he/she understands the fundamental concepts and skills of marketing research as well as his/her writing skills.								

	Data Analysis Test: Students' ability to use statistical methods for analysing and understanding marketing research data is assessed, so is their ability to interpret research findings. Group Assignment: The class will be divided into groups. Each group is required to undertake one marketing research project to address a real-world marketing issue/problem, integrating with their understanding of the concepts, analytical skills to handle datasets and a verbal presentation to present their research results. The rest of the class are expected to contribute to the discussion in class. A meaningful discussion of the project can only occur when all students in the class, not just the presenting students, make a contribution. Every member in the team must participate in the presentation. An open discussion will then follow and be concluded by comments from the lecturer. This piece of assessment is to test how well students can apply up-to-date marketing research techniques to solve real marketing problems.	
Student Study Effort Expected	Class contact:	
	▪ Lectures	39 Hrs.
	Other student study effort:	
	▪ Preparation for lectures	25 Hrs.
	▪ Preparation for assignment / group project and presentation	60 Hrs.
	Total student study effort	124 Hrs.
