

Subject Description Form

Subject Code	ITC530
Subject Title	Design Concept
Credit Value	3
Level	5
Pre-requisite / Co-requisite/ Exclusion	Nil
Objectives	Students will approach the process of design development through exploring their personal design identity and D.N.A via intensive personal research methodologies and experimentation. Through project-based learning, students will acquire knowledge and understanding of contemporary fashion thinking. Students will learn to utilize various media and technologies such as GenAI to assist with research, problem solving and experimentation, to enrich their design and development process. In addition, they will develop an understanding and awareness of sustainability and ethics that they are expected to integrate into their practice.
Intended Learning Outcomes	Upon completion of the subject, students will: 1. Possess and demonstrate a global outlook in the development of their design process and research. 2. Using a wealth of media and tools such as GenAi, to develop and apply well-informed, innovative and appropriate design decisions to solve complex design problems. 3. Identify and develop their individual design handwriting and their own design D.N.A. 4. Integrate aspects of sustainable practice into their work. 5. Apply meaningful design solutions, critical and creative thinking to challenge the current fashion landscape within their design process and development.

Subject Synopsis/ Indicative Syllabus	1. Design Conceptualization Conceiving highly innovative and creative design solutions to all briefs. 2. Creative Problem Solving to disrupt traditional design thinking Brainstorming and mapping of ideas to develop new and relevant product concepts, with an ability to experiment and think openly and creatively. 3. Professional presentation materials The creation of professional visual digital / physical work to ensure that ideas are succinctly and clearly communicated.						
Teaching/Learning Methodology	The subject will be delivered in studio, replicating an industry design studio environment, with an emphasis on innovative design development. Students will be encouraged to creatively interpret a number of design briefs into practice based outcomes. Lectures, seminars and on-to-one tutorials will supplement the studio time. Visiting experts may be invited to critique the group work, providing an industry approach to design and a professional point of view. The result will ensure that students are successfully able to tackle design briefs in a commercial setting, producing products that are fit for purpose.						
Assessment Methods in Alignment with Intended Learning Outcomes	Specific assessment methods/tasks	% weighting	Intended subject learning outcomes to be assessed
