| <b>Pre-requisite /<br/>Co-requisite/<br/>Exclusion</b> | Nil                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
| <b>Objectives</b>                                      | <p>This subject aims to encourage students to develop and expand on their practical and technical skills. Workshops and introductions to on site facilities and technologies will facilitate students to adopt and develop their own response, to potential craft and technological processes which they may apply to future assignment work.</p> <p>Throughout the unit, students will apply creative and analytical thinking to every aspect of their work. Tutorial guidance will support students in establishing unique 'alternatives' and individual processes that shall become integral to their practice.</p> |
| <b>Intended Learning Outcomes</b>                      | <p>Upon completion of the subject, students will be able to:</p> <ol style="list-style-type: none"><li>1. Assess a broad range of contemporary technological processes and innovative techniques, to be integrated into all aspects of their work.</li><li>2. Establish a critical awareness of the latest technologies and technical innovations and appropriate them into their practice.</li><li>3. Develop unique technological processes that can be applied to the realization of a product, to a professional standard.</li><li>4. Underpin all work with reference to sustainability.</li></ol>                |
| <b>Subject Synopsis/<br/>Indicative Syllabus</b>       | <ol style="list-style-type: none"><li><b>1. Recent Developments of Garment Processing Technologies</b><br/>Overviews of current product processing technologies.</li><li><b>2. Case Studies, if appropriate</b><br/>Objective evaluation of product development and realisation.</li><li><b>3. Product Development</b><br/>The integration of traditional and contemporary construction techniques, applied to a product with a defined purpose.</li></ol>                                                                                                                                                             |

|  |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
