

Subject Description Form

Subject Code	ITC550
Subject Title	Creative Textiles
Credit Value	3
Level	5
Pre-requisite / Co-requisite/ Exclusion	NIL
Objectives	This subject will expose students to current trends in material design and textile innovations. Practical workshops will introduce students to traditional and technological processes, as well as conceptual and futuristic methods that apply to textiles. Students will be encouraged to explore and develop an analytical approach towards establishing experimental outcomes. Tutorial guidance will support students in establishing unique alternative and individual processes that will become integral to their practice.
Intended Learning Outcomes	Upon completion of the subject, students will be able to: 1. Critically analyse appropriate design methods and textile techniques to create innovative, high quality textile outcomes for a fashion product. 2. Independently research, explore and experiment with new applications and technologies that apply to material and textile creation. 3. Establish their own unique material and textile process. 4. Effectively apply their alternative findings to the realization of a product.

Subject Synopsis/ Indicative Syllabus	A. Techniques and processes of textile and material creation Digital print, print placement, engineered prints, traditional textile embellishment, textile manipulation, embroidery, experimentation with textile technologies. B. Study of futuristic and technological process Surface designing using virtual reality. C. Design and development process for appropriate application of textile and material manipulation in design																														
Teaching/Learning Methodology	Fundamental concepts and knowledge will be introduced through lectures, practical demonstrations, and workshop activities. Through workshops, students will perform practical analysis and tests. Students will be encouraged to experiment with different techniques and materials to develop their own unique design approach.																														
Assessment Methods in Alignment with Intended Learning Outcomes	<table><tr><th rowspan="2">Specific assessment methods/tasks</th><th rowspan="2">% weighting</th><th colspan="6">Intended subject learning outcomes to be assessed (Please tick as appropriate)</th></tr><tr><th>1</th><th>2</th><th>3</th><th>4</th><th></th><th></th></tr><tr><td>1. Individual Project</td><td>100%</td><td>✓</td><td>✓</td><td>✓</td><td>✓</td><td></td><td></td></tr><tr><td>Total</td><td>100%</td><td colspan="6"></td></tr></table> Students will produce an individual body of work and deliver a professional presentation at the end of the course. The project will assess the student's ability to develop innovative and alternative uses of traditional and technological processes that apply to material and textile creation. Students will then analytically apply outcomes to appropriate prototypes, for their personal route of specialism. “The materials submitted for this assessment must be the student's own work. The submitted work may not be accepted for the purpose of assessment if its authenticity is questionable. Submitting GenAI-generated materials as students' own work or part of their work is an act of academic dishonesty. Students who are found committing academic dishonesty will face disciplinary actions.”	Specific assessment methods/tasks	% weighting	Intended subject learning outcomes to be assessed (Please tick as appropriate)						1	2	3	4			1. Student Study Effort Expected	Class contact:	
	▪ Lectures	6 Hrs.
	▪ Studio	33 Hrs.
	Other student study effort:	
	▪ Assignments	66 Hrs.
	Total student study effort	108 Hrs.
