

Subject Description Form

Subject Code	ITC6000B
Subject Title	Creative Design for Practice Based Research
Credit Value	3
Level	6
Pre-requisite / Co-requisite / Exclusion	Background knowledge in fashion and textile design
Objectives	The subject prepares the research student towards the acquisition of intellectual autonomy, improved judgment making and enhanced technical competence in the entire practical based research process; and be able to apply and adopt such skill into their own practices to produce assessable documentation and aesthetic prototypes
Intended Learning Outcomes	Upon completion of the subject, students will be able to: a. Understand practice related research in Art and Design; b. Articulate clearly the relationship between the research role and the practitioner role; c. To bridge practical concept development and physical prototyping in creating high value fashion and textile design. d. To conduct design orientated methodological planning namely, practice-led and practice-based research methodology in the domain of fashion and textile design research studies. e. Evaluate the design and development process and initial prototypes according to the aesthetical and technological characteristics; f. Finalize detail design with specifications by combining artistic creativity, scientific rationales and principles, as well as engineering technical-know-how to design and develop high quality fashion prototypes/artifacts.

Subject Synopsis/ Indicative Syllabus	This subject aims to provide students with theoretical and professional knowledge in advanced practice related research in the fashion and textile domain. The syllabus is divided into 3 main parts, they are: <u>Part 1: Exploration and analysis phase on design orientated research direction</u> - Analysis of the research problems - Problem recognition through - Methodological planning to contain innovative insights into practice <u>Part 2: Ideation and synthesis development</u> - Development of theoretical framework through conceptualization process - Creation of individual solutions - Creativity techniques to combine sub-solutions into alternative designs - Development of initial prototypes <u>Part 3: Evaluation phase to develop detail design with specification model</u> - Evaluation of prototyping - Documentation of design processes and specifications that extend the depth and breadth of referential contexts - Production refinement to achieve final physical quality prototypes in the fashion and textile context.																																						
Teaching/Learning Methodology	This subject comprises lectures, tutorials, design practice (Studio Based) and presentations. Lectures are organized to disseminate the theoretical concepts and investigation methods in design research. Tutorials/individual guidance (due to specialized research areas) are arranged to foster and deepen students’ knowledge and skills of the research subject. Project assignments are employed as assessment tools to assess the learning outcome.																																						
Assessment Methods in Alignment with Intended Learning Outcomes	<table><tr><th rowspan="2">Specific assessment methods/tasks</th><th rowspan="2">% weighting</th><th colspan="6">Intended subject learning outcomes to be assessed</th></tr><tr><th>a</th><th>b</th><th>c</th><th>d</th><th>e</th><th>f</th></tr><tr><td>Continuous Assessment</td><td>40%</td><td>✓</td><td>✓</td><td>✓</td><td>✓</td><td>✓</td><td></td></tr><tr><td>Examination</td><td>60%</td><td>✓</td><td>✓</td><td>✓</td><td>✓</td><td>✓</td><td>✓</td></tr><tr><td>Total</td><td>100%</td><td colspan="6"></td></tr></table> Explanation of the appropriateness of the assessment methods in assessing the intended learning outcomes: Continuous assessment project is effective in training students’ ability to apply their understanding to analyze and solve problems. Examination is the effective in examining students’ ability for achieving the overall learning outcomes. Student Study Effort Expected	Class contact:	
	▪ Lectures	10 Hrs.
	▪ Tutorials	23 Hrs.
	▪ Seminars/presentations	6 Hrs.
	Other student study effort:	
	▪ Reading, projects and experimentations	81 Hrs.
	Total student study effort	120 Hrs.
