

Subject Description Form

Subject Code	ITC6000P
Subject Title	Research Impact in Textiles and Clothing
Credit Value	3
Level	6
Pre-requisite / Co-requisite / Exclusion	Nil
Objectives	The objectives of this subject are: • To prepare students to conduct research with impact; • To provide students with knowledge in creating, capturing, evaluating and disseminating research impact for traditional (i.e. text based) and non-traditional outputs; • To provide students with skills to demonstrate the impact of their research.
Intended Learning Outcomes	Upon completion of the subject, students will be able to: a. acquire a good understanding in developing, documenting and assessing research impact; b. implement appropriate formats to present their research; c. continuously develop their knowledge and ability to develop impactful research.
Subject Synopsis/ Indicative Syllabus	This subject aims to provide students with a clear understanding of the different areas of research impact. Provide key skills in presenting research outputs within traditional and non-traditional formats to ensure “reach” and “impact”. The syllabus includes: • Key areas of research impact - Policy influence and Change - Social impact - Cultural impact - Economic impact - Impact on health and wellbeing - Technological developments • Research Outputs: Traditional and Non-Traditional - Publications - Portfolios • Research impact case studies • Research engagement • Capturing research to evaluate impact • Presenting research on open access databases (PIRA, ORCID, SCOPUS)

Teaching/Learning Methodology	This subject comprises of lectures and seminars. Key theories and concepts will be delivered via lectures and seminars. Group/individual projects and assignments are employed as the assessment tools for students’ strategic thinking, team working and presentation skills.				
Assessment Methods in Alignment with Intended Learning Outcomes	Specific assessment methods/tasks	% weighting	Intended subject learning outcomes to be assessed		
			a	b	c
	Continuous Assessment	40%	✓	✓	✓
	Group Project	40%	✓	✓	✓
	Presentation	20%	✓	✓	✓
	Total	100%			
	Explanation of the appropriateness of the assessment methods in assessing the intended learning outcomes:				
	Continuous assessment trains students to analyze and solve problems based on what they learn in class whereas examination evaluates whether the students have achieved the overall learning outcomes.				
Group project and presentation are employed as the assessment tools for students’ strategic thinking, team working and presentation skills.					
Student Study Effort Expected	Class contact:				
	▪ Lectures			13 Hrs.	
	▪ Seminars			10 Hrs.	
	▪ Presentation			6 Hrs.	
	Other student study effort:				
	▪ Self-study			65 Hrs.	
	▪ Preparation for assignments			26 Hrs.	
	Total student study effort			120 Hrs.

Subject Description Form

Subject Code	ITC6854																																						
Subject Title	Textile Science II: Textile/Fabric Structure and Mechanics																																						
Credit Value	3																																						
Level	6																																						
Pre-requisite / Co-requisite / Exclusion	Nil																																						
Objectives																																							
Intended Learning Outcomes	Upon completion of the subject, students will be able to: - Apply different concepts, theories and models on textile/fabric structure and mechanics - Catch the up-to-date information of structure and mechanics of textile materials - Understand different approaches used in textile/fabric mechanics analysis																																						
Subject Synopsis/ Indicative Syllabus	This subject will provide foundation and guide for research students to carry out in-depth study of textile/fabric structure and mechanics in terms of concepts and theories, models, applications and current status as well as future development. In addition, general approaches used in textile/fabric mechanics analysis such as energy methods, force methods, numerical mechanics/computational mechanics will be dealt with.																																						
Teaching/Learning Methodology	This is a guided study course and will have derived self-studying. The subject lecturer will suggest reading materials based on student's research area and discuss with the students. Students are requested to take written examination, oral presentation and prepare reports based on the reading materials.
