

Subject Description Form

Subject Code	ITC6984
Subject Title	Guided Study in Design Thinking: Creativity and Multidiscipline in Research Study
Credit Value	3
Level	6
Pre-requisite/ Co-requisite/Exclusion	Nil
Objectives	This subject aims to equip students with the comprehensive knowledge in design thinking research method within fashion and textile industry. Through case study, they can learn both theoretical and practical design thinking methods on technological development to tackle with real-world problems in human-centric manner. The objectives are: - To engage students to explore critical research issues or design problems pertaining to business, theoretical and methodological considerations; - To allow students to gain a thorough understanding and develop insights regarding design thinking research method to deliver innovation and act as a driver of commercial success or social change; - To enable students to utilize design thinking method on their research study to fill the multidisciplinary gaps and tackle with real-world situations
Intended Learning Outcomes	Upon completion of the subject, students will be able to: - Articulate the significance and understanding of design thinking research method, includes identifying and creatively solving problems; - Integrate design thinking method and technological knowledge to non-linear idea generation and product development processes for commercial environment; - Reflect and relate the insights they have gained from the case study of real-world problems / market needs to their research study
Subject Synopsis/ Indicative Syllabus	This guided study subject aims to provide an introduction to the increasingly widely adopted cross-functional business concept of Design Thinking, and the influential role technology plays in it, within the context of the fashion industry. It enables students to grasp design thinking research method to tackle with real-world situation in a human-centric manner. The major parts include: - Concept of Design Thinking and Its Role within Innovation - Framework of Design Thinking - Identify: Discover and Define - Solve: Create and Evaluate - Five Stages on Design Thinking Process - Empathize, define, ideate, prototype and test - Design Thinking Tools - Idea Generation and Product Development - Cross-disciplinary Creativity and Design Thinking - Impact on Research and Business Model

	- Special Issues in Design Thinking Sustainability Ethical Consideration - Case Study																																														
Teaching/Learning Methodology	Teaching will be comprised of interactive one on one guiding session for critical analysis and discussions on design thinking research, theoretical and methodological issues identified. Students have to analyze design thinking cases on various points of view. Then, reflect and relate the insights gained to real-world situations, as well as their research work. They have to prepare and submit about 3000-5000 words paper regarding a case study and their reflection. They also have to present their work to enable more case learning, discussion and critical thinking among students.																																														
Assessment Methods in Alignment with Intended Learning Outcomes	<table><tr><th rowspan="2">Specific assessment methods/tasks</th><th rowspan="2">% weighting</th><th colspan="6">Intended subject learning outcomes to be assessed (Please tick as appropriate)</th></tr><tr><th>a</th><th>b</th><th>c</th><th></th><th></th><th></th></tr><tr><td>1. Assignment</td><td>35%</td><td>✓</td><td>✓</td><td>✓</td><td></td><td></td><td></td></tr><tr><td>2. Presentation</td><td>35%</td><td>✓</td><td>✓</td><td>✓</td><td></td><td></td><td></td></tr><tr><td>3. Attendance and participation</td><td>30%</td><td>✓</td><td>✓</td><td>✓</td><td></td><td></td><td></td></tr><tr><td>Total</td><td>100 %</td><td colspan="6"></td></tr></table> Explanation of the appropriateness of the assessment methods in assessing the intended learning outcomes: For the assignment and presentation, students will conduct a mini research-based case study regarding design thinking. They then have to submit and present a 3000-5000 words paper that includes a review of their choice of case, analysis of its methodology and outcomes, and reflection of how to apply on their future research study. Presentation enables more case learning, discussion and critical thinking among students. For attendance and participation, students will be required to participate in classroom discussions and exercises allowing them to reflect on the research methods, and to discuss the theoretical and technical implications of design thinking research method. The grade is calculated according to the percentage assigned; and the completion and submission of all component assignments are required for passing the subject.
