

Subject Description Form

Subject Code	ITC2005T
Subject Title	Apparel Pattern
Credit Value	3 credits
Level	2
Pre-requisite/ <Co-requisite> / (Exclusion)	Nil
Objectives	The subject identifies and analyses technical methods employed by the apparel industry to construct and develop apparel patterns. It specifically provides students to identify the body structure, measurement taking and size charts for apparel patterns. The students will be able to construct patterns of popular apparel items such as knitted shirt and woven skirt. On completion the students will be able to understand and practice in constructing patterns for the above products. They will have the ability to identify and solve problems of styling using dart manipulation, fitting and pattern grading.
Intended Learning Outcomes	Upon completion of the subject, students will be able to: a. identify the various body structure for apparel patterns and conduct a measurement taking procedure for apparel patterns; b. interpret a size chart/table for apparel patterns; c. construct patterns for a knitted shirt and a woven skirt; d. perform pattern grading for the apparel products; and e. style pattern through dart manipulation, assess pattern fitting and apply pattern grading.
Subject Synopsis/ Indicative Syllabus	(I) The Fundamental Structure of the Human Body and Measurement Taking for Apparel Patterns. (II) Basic knowledge of the human body anatomy and morphology, body measurement taking process for apparel pattern and work tools for pattern construction. (III) The Use of Size Charts/Tables in the Apparel Industry. (IV) Definition of size charts/tables and their uses in the apparel industry. (V) Methods of constructing apparel patterns (VI) Flat pattern technique and modeling/draping. The method of each technique is differentiated in practice. (VII) Pattern construction for knitted shirt (VIII) Using the flat pattern technique to construct the patterns of the knitted shirt with full pattern specification requirement. In relation to a size table, the pattern grading requirement is analyzed.

	(IX) Pattern construction for woven skirt Using the flat pattern technique to construct the patterns of the woven skirt with full pattern specification requirement. In relation to a size table, the pattern grading requirement is analyzed. Basic fitting assessment is analyzed and solved with pattern adjustment. Simple styling by dart manipulation is exemplified.																														
Teaching/Learning Methodology	Dissemination of knowledge to small groups through lectures and practice in a studio environment will be employed. This interactive approach offers better opportunities for students to gain hands-on experience as well as theoretical understanding of the principles to meet the various commercial demands in the marketplace. The students will present solutions to problems solved in assigned project work on the student centred projects.																														
Assessment Methods in Alignment with Intended Learning Outcomes	<table><tr><th rowspan="2">Specific assessment methods/tasks</th><th rowspan="2">% weighting</th><th colspan="6">Intended subject learning outcomes to be assessed (Please tick as appropriate)</th></tr><tr><th>a</th><th>b</th><th>c</th><th>d</th><th>e</th><th></th></tr><tr><td>1. Coursework</td><td>100%</td><td>✓</td><td>✓</td><td>✓</td><td>✓</td><td>✓</td><td></td></tr><tr><td>Total</td><td>100%</td><td colspan="6"></td></tr></table> Explanation of the appropriateness of the assessment methods in assessing the intended learning outcomes: The learning outcomes of the subject require an immediate learning assessment by assignments, practical exercises and student-centred projects. In pattern drafting subjects there are various hands-on learning experiences and hence continuous assessment by coursework is more appropriate.
