

Subject Description Form

Subject Code	ITC3039T
Subject Title	Analytical Methods for Fashion Business
Credit Value	3 credits
Level	3
Pre-requisite/ <Co-requisite> / (Exclusion)	Nil
Objectives	The subject aims to provide students with the knowledge to present numerical data in a concise and informative way, and to develop students' skills analysing fashion business problems quantitatively. This subject also contributes to the development of statistical thinking.
Intended Learning Outcomes	Upon completion of the subject, students will be able to: - Apply the appropriate statistical techniques to present, analyse and interpret the numerical data generated in surveys in the fashion business; - Competently use popular statistical packages to prepare the data file of survey results and generate appropriate output for the statistical analysis; - Interpret and analyse the output of statistical software packages generated in surveys in the fashion business; - Analyse the numerical data published in fashion marketing and retailing literature; - Develop critical and creative thinking in identifying and solving quantitative problems in the business research.
Subject Synopsis/ Indicative Syllabus	(I) Descriptive Statistics Presenting fashion business data in a useful, informative and concise manner using the appropriate tables, charts and graphs, and statistical measures of central tendency and spread such as mean, median, mode, inter-quartile range, standard deviation, coefficient of variation for decision making. (II) Theoretical Distribution Probability distribution, including the Normal, Binomial and Poisson distributions - examples, interpretation, examples of applications in fashion business. (III) Planning and Performing Business Research Sampling methods: random, stratified, quota, cluster. Reliability analysis of survey results. Sampling distributions of the mean and proportion. Hypothesis testing. Determination of sample size. Comparing group means: T-test and one-way ANOVA. Preparation of the data file of survey results and generation of appropriate output of software packages, e.g. SPSS.

Student Study Effort Expected	Class contact:	
	▪ Lecture	26 Hrs.
	▪ Studio	12 Hrs.
	Other student study effort:	
	▪ Self-study	66 Hrs.
	Total student study effort	104 Hrs.
