

Subject Description Form

Subject Code	ITC3229E
Subject Title	Fashion Project Management
Credit Value	3
Level	3
Pre-requisite/ Co-requisite/ Exclusion	Nil
Objectives	Project-based tasks are increasingly important in nowadays fashion industry. This subject is to introduce the techniques and tools for managing projects in fashion operations. This subject will equip students with the competence of project initiating, planning, executing, and closing skills which are essential for achieving the success of fashion projects including fashion product development, fashion show and promotion campaigns.
Intended Learning Outcomes	Upon completion of the subject, students will be able to: a) Understand the strategic importance of project management for fashion and textiles industries. b) Analyze and evaluate of project benefits to the competitiveness of fashion and textiles businesses. c) Analyze and evaluate the contemporary issues in international project management. d) Demonstrate the management, leadership, and coordination skills in fashion projects. e) Apply the qualitative and quantitative techniques to initiate, plan, and monitor fashion projects, such as fashion show and product development.
Subject Synopsis/ Indicative Syllabus	1. Introduction and strategic importance of project management. The foundation concepts of project will be introduced. The operational and continuous improvement views on the project life cycle will be discussed. The relations between organizational strategy and project selection will be evaluated. Students will be able to justify the selected fashion projects in terms of strategy-project alignment. 2. Project initiation The merits and drawbacks of different project structures will be addressed. The techniques for defining projects (project scopes,

	trade-offs, and work breakdown structures) will be introduced. Students will be able to initiate the selected fashion projects and define the projects in detail. 3. Project planning Project network development and leveling project resources techniques will be introduced. The risk identification, risk assessment, risk response and risk control approaches will be discussed. Students will be able to develop scheduling for project time and resources, and risk management plan for the selected fashion projects. 4. Stakeholders' management in projects The evaluation and analysis of salient and powerful internal and external stakeholders will be discussed. The stakeholder management techniques will be introduced. Students will be able to seek cooperation from salient and powerful stakeholders affecting the project success. 5. Project control and closure The project monitoring and closure techniques will be introduced for continuous improvements within and between projects. Students are able to conduct retrospective process to generate lesson learned and achieve continuous improvement in fashion operations. 6. Applying project management skills Students will be encouraged and facilitated to participate in the planning and execution of the institute's projects, such as study trips and graduation fashion shows. Students are able to apply the knowledge learned from the class to the real-world projects.
Teaching/Learning Methodology (Note 3)	The intended learning outcomes are achieved through lectures, tutorials, and self-learning components. The theoretical concepts and management techniques are discussed in lectures with elaboration of real-world fashion case studies. Students will further apply the knowledge in tutorials through fashion case discussion and problem solving. This course will integrate research on issues related to project management with tools and techniques. In particular, students are required to read selected fashion case studies and participate in discussions in class. Additionally, students are required to review and analyze the literature. This course will integrate with the institute's projects such as fashion show to let students observe and apply knowledge to practical fashion projects. All these together can enhance students'

	analytical capability and bridge the gap between theory and practice.							
	Student’s learning outcomes will be assessed through feedbacks including coursework, quiz, and project reflection & planning reports. Specifically, the coursework includes class discussion, sharing and presentation of case studies. The quiz assesses the students’ capability to apply project management skills and models in problem solving. The project reflection & planning reports require students to critically review the class contents and a selected project, which aims at generating lesson learned. The students will then propose a new project and develop a project plan grounded on the lesson learned. This assessment encourages students to view project life cycle as a continuous improvement process.

Student Study Effort Expected	Class contact:							
	▪ Lecture						26 Hrs.	
	▪ Workshops						12 Hrs.	
	Other student study effort:							
	▪ Reviews of lecture contents						26 Hrs.	
	▪ Assignments						50 Hrs.	
	Total student study effort						114 Hrs.
