

Subject Description Form

Subject Code	ITC4054D
Subject Title	3D Modeling
Credit Value	3 credits
Level	4
Pre-requisite/ <Co-requisite> / (Exclusion)	ITC3072D Fashion Design II
Objectives	Provides a working knowledge of the alternative way of producing a garment by modeling it directly on the stand and confront directly the aesthetic approach to evaluating the toile together with the theory of flat pattern. Although modeling is steeped in the artistic aspects of design, one is always testing the design as to how practical the eventual garment will be to make, whether for couture or the mass market and realistic of making – up process. Inter-acts the theoretical principles of construction with the draping method. Enhancement the important role of origami application and draping techniques to be introduced for the creative design level.
Intended Learning Outcomes	Upon completion of the subject, students will be able to: a. Understand the best method of construction an experimental garment as the problem of construction will generally be solved during the modeling and making of the toile b. The grain of fabric will depend on the type of garment desired and should be comparable with the cloth chosen for the finished garment c. An acceptable tolerance must be given according to the styling of garment desired, the placement of fullness and restriction of human body movement must be considered bearing in mind prior to draping fabric on to stand. d. An analysis the design features and their restrictions in relation to the layering of fabric and seams that might be interfered from the making-up process. e. Check the measurement accuracy and convert the 3D toile into 2D pattern by using the principles and practice acquired from previous pattern constructive applications.

Subject Synopsis/ Indicative Syllabus	(I) Specialeffects Introduction & Briefing 1. 3D cording 2. Rolling tuck 3. Rabbit ear 4. Bow / ribbon tie 5. Cut and Insert / conceal tunnel 6. Fishing line / boning 7. Twisted knot- single & double layer knot 8. Smocking 9. 3D spiral / Ruffles 10. Square cowl 11. Fabric weaving 12. Laying /Quilting (II) Build – in sleeve 1. Geometric shape: square / rectangle / circle 2. Wrap over Individual practice 3. Twisting pleat 4. Panel cut / gusset Individual practice 5. Motif placement 6. Material dynamic Individual practice (III) Creative Design Analysis Alexander McQueen Series (IV) Individual presentation 1. Final outfit presentation on human body 2. Appreciation of problem based learning practice 3. Photo taking 4. Comments sharing																														
Teaching/Learning Methodology	Weekly theoretical techniques complemented with practical work led by subject tutor in lab. Students are required to participate in experimental activities under the guidance of subject tutor.																														
Assessment Methods in Alignment with Intended Learning Outcomes	<table><tr><th rowspan="2">Specific assessment methods/tasks</th><th rowspan="2">% weighting</th><th colspan="6">Intended subject learning outcomes to be assessed (Please tick as appropriate)</th></tr><tr><th>a</th><th>b</th><th>c</th><th>d</th><th>e</th><th></th></tr><tr><td>1. 	which students demonstrate technical awareness methods, materials and processes in recognised conventions.	
Student Study Effort Expected	Class contact:	
	Tutorial /Studio	26 Hrs.
	Lab / Workshop	12 Hrs.
	Other student study effort:	
	• Assignment I – Effects Handling Skill	30 Hrs.
	• Assignment II – 3D Structural Sleeve	30 Hrs.
	• Research and Design Feature Analysis	6 Hrs.
	Total student study effort	104Hrs.
