

Subject Description Form

Subject Code	SFT323CD
Subject Title	Contour Design
Credit Value	3
Level	3
Pre-requisite/ Co-requisite/ Exclusion	Pre-requisite: SFT311FD Apparel Pattern Exclusion: ITC3218I Lingerie Development
Objectives	The subject introduces the concepts of contour fashion pattern construction and the sample development process as the basis to develop new knowledge and experience of contour fashion pattern design and development through hands-on practice. It studies the development of various styles of garments worn close to, or shaping the contours of the human form, from pattern design and development, sewing practice, to technical specification.
Intended Learning Outcomes	Upon completion of the subject, students will be able to: (a) recognize inspiration from various sources for developing original concepts, ideas, and finally lead to unique collections; (b) identify both basic and advanced fashion industry patternmaking theory and techniques to produce various styles of contour fashion products; (c) integrate and exploit different methods of pattern engineering and sewing techniques to produce various styles of contour fashion products; (d) demonstrate the necessary communication skills to present concepts and design portfolio at a level acceptable to industry. (e) demonstrate punctuality and participation as the industry requires.
Subject Synopsis/ Indicative Syllabus	(I) Product Development Process Understanding of the product development process of contour fashion products. (II) Design and Pattern Analysis Precise pattern diagnosis/prediction of design. Use of different patternmaking methods for various styles of contour fashion products.

	(III)Patternmaking and Technicalities of Pattern Development Analysis of the relationships between body measurement, fabric characteristics, component suitability, design and pattern construction in respect to various styles, specifications and functions of contour fashion. products. Pattern adaptation and development in relation to style function and fit. Integration and comparison of different pattern design methods, such as pattern drafting, flat patternmaking and three-dimensional modelling. Critical analysis of the use of ease (movement and design) and tension for various styles and fabrics. (IV) Realization and Presentation Realisation on workstand. Making-up and finishing processes of prototypes. Critical assessment of the problems encountered in sewing, fitting, as well as fabric and component suitability in relation to various specifications of contour fashion products. Devise of the relationships and formulation of solutions for sewing and fitting problems, as well as modification of materials for various styles of contour fashion products.																																																																				
Teaching/Learning Methodology	This subject will be conducted in both the classroom, design studio with pattern equipment, and the garment workshop, equivalent to a real-life industrial environment. Students will be able to practice the learned concepts and methods of contour fashion patternmaking and construction from the design stage to making the first sample. Students will need to critically evaluate the construction methods and solve any technical problems encountered in sewing, fitting and use of materials. The assessment will base on a variety of individual and group-based activities, which may include presentation of an assigned exercise, problem-based learning tasks and discussion of current issues.

	Explanation of the appropriateness of the assessment methods in assessing the intended learning outcomes: For intended learning outcomes a & b, students' comprehension of relationships between design, pattern, materials and construction methods used in products commercially available will be assessed via a research project. For intended learning outcomes c, d & e, students' ability to produce an contour fashion outfit from design to patternmaking and sample construction will be assessed via an individual project. For intended learning outcome e, students' professionalism, including communication skills and punctuality, will be assessed via presentations, attendance and participation in class.	
Student Study Effort Expected	Class contact:	
	▪ Lecture	12 Hrs.
	▪ Studio	18 Hrs.
	▪ Lab	9 Hrs.
	Other student study effort:	
	▪ Projects	66 Hrs.
	Total student study effort	105 Hrs.
