

Subject Description Form

Subject Code	SFT402FI
Subject Title	Fashion Product Development
Credit Value	3
Level	4
Pre-requisite/ Co-requisite/ Exclusion	Pre-requisite: SFT202FY Introduction to Fashion Materials and SFT204FY Introduction to Apparel techniques Exclusion: ITC4060T Fashion Product Development
Objectives	The subject presents the processes of fashion product development: fashion trend / market analysis, product planning, sourcing strategies, fabrication techniques, development processes, specification requirements, costing and performance estimation. It provides the necessary knowledge and skills for developing fashion products which are sustainable and competitive in today's customer-driven market environment.
Intended Learning Outcomes	Upon completion of the subject, students will be able to: (a) understand professional practice in fashion industry; (b) analyse fashion trend, market/consumer demands, and product specifications according to specific end-uses; (c) develop relevant technical criteria for new product lines and product development processes, to satisfy the requirements of target markets, locally and internationally; (d) integrate marketing information, including consumer behavior and trends, technical specifications and cost analysis, to create new marketable and producible fashion products; (e) demonstrate holistic knowledge of successful fashion product development through case studies, project implementation, and outcome analysis and presentation.
Subject Synopsis/ Indicative Syllabus	(I) Product Line Planning Processes and activities of formulating fashion-directed product lines for identified target markets with regard to fashion trends, consumer lifestyles, assortment, timing and pricing. (II) Product Design Process and Analysis Analysis of product design and identification of its strengths, weaknesses and market potential in accordance with the target markets/trends, end-uses, and/or advanced / innovative techniques or developments in fashion industry, etc.

	(III) Sourcing & Fabrication Selection and sourcing of materials, including new fabric structures/functions/designs for new fashion products. Application of trend analysis and market plans to manufacture products with required technical criteria, costing level, and performance for satisfying different fashion markets. (IV) Costing and Product Performance Estimation Product cost analysis of different costing components, including fabrics, trims, finishes, labour, overheads, shipping, duty, etc. Standards and tests used to evaluate material quality, properties, styles, and product performance for end-uses. (V) Market Regulations Government rules and regulations for fashion products, such as import technical regulations, quality regulations, and consumer regulations.
Teaching/Learning Methodology	The subject will consist of lectures and studio sessions. Students will be encouraged to integrate and apply the knowledge learned in lectures, group projects and in-class group discussions to case studies in order to develop students' critical thinking, teamwork and presentation skills. The group projects will offer ample opportunities for students to deepen their understanding of the whole fashion product development process and to practice students' effective communication skills among different parties of fashion supply chain. Students will be encouraged to integrate their technical knowledge and problem-solving skill to develop fashion products. Students will present their findings and solutions to different problems or different scenarios in the assigned projects.

Assessment Methods in Alignment with Intended Learning Outcomes	Specific assessment methods/tasks	% weighti ng	Intended subject learning outcomes to be assessed (Please tick as appropriate)				
			a	b	c	d	e
	Continuous Assessment	50%	✓	✓	✓	✓	✓
	1. Case studies	20%	✓	✓		✓	
	2. Group project	30%	✓	✓	✓	✓	✓
	Examination	50%	✓	✓	✓	✓	✓
	Total	100%					
	Explanation of the appropriateness of the assessment methods in assessing the intended learning outcomes: The assessment instruments will include case studies and group projects in which students will be encouraged to analyze and address market and consumer demands and develop new marketable and producible products with relevant technical specifications and quality requirements. Students’ proficiency in areas such as data collection, trend analysis, cost analysis, etc., will be also assessed based on the target customers’ demands. In-class discussion during studio sessions will provide students a better understanding of fashion product development in today’s market environment. Students’ performance in terms of product analysis, technical specifications, market requirements, critical thinking and analytical skills to be applied in product development processes will also be assessed by written examination.						
Student Study Effort Expected	Class contact:						
	▪ Lecture					26 Hrs.	
	▪ Studio					12 Hrs.	
	Other student study effort:						
	• Assignments					67 Hrs.	
	Total student study effort					105 Hrs.
