

Subject Description Form

Subject Code	SFT410CD
Subject Title	Activewear & Swimwear Design
Credit Value	3
Level	4
Pre-requisite/ Co-requisite/ Exclusion	Pre-requisite: SFT311FD Apparel Pattern Exclusion: ITC4210I Activewear Development
Objectives	The subject identifies and explores the creative process of both activewear and swimwear design and subsequent collection development. It examines the process of collection design and development in consider with aesthetic, functional and technical aspects. Realization and presentation are also included for a comprehensive learning.
Intended Learning Outcomes	Upon completion of the subject, students will be able to: (a) understand the functional design criteria for various types of activewear and swimwear; (b) recognize inspirations from various sources for developing original concepts and ideas and develop a series of unique product.; (c) and integrate different methods of pattern engineering and sewing techniques to produce various styles of products; (d) select suitable materials based on the functional requirements; (e) demonstrate the necessary communication skills to present design concepts and ideas at a level acceptable to industry, as well as demonstrate punctuality and participation as the industry requires, as well as demonstrate punctuality and participation as the industry requires.
Subject Synopsis/ Indicative Syllabus	(I) Aesthetic Design Considerations Understanding the types of activewear and swimsuit silhouette and design trend Organizing inspirational concepts and sketching ideas Considering visual story presentation Picking colors and preparing creative print designs

	(II) Functional and Technical Design Criteria Understanding the use of production drawing and technical specifications (e.g. fabric and trims, seam and stitch) Considering the use of ease and fabric (in appropriate tension) in response to body movement and functional needs Analyzing the relationships between body measurement, fabric characteristics, component suitability, design and pattern construction in respect to various styles, specifications and functions of activewear and swimwear (III) Realization and Presentation Integrating different pattern design methods, such as pattern adaptation, pattern drafting, flat patternmaking and three- dimensional modelling. Selecting appropriate making-up and finishing methods of garment prototypes Assessing and responding to the problems encountered in sewing and fitting of activewear and swimwear products Demonstrating effective presentation of fashion concepts and ideas with portfolio development
Teaching/Learning Methodology	This subject will be conducted in both the classroom, design studio with pattern equipment, and the garment workshop, equivalent to a real-life industrial environment. Students will be able to show their design creativity and practice the learned concepts and garment making methods of activewear and swimwear. Students will need to critically evaluate the construction methods and solve any technical problems encountered in sewing, fitting and use of materials. The assessment will base on a variety of individual and group-based activities, which may include presentation of an assigned exercise, problem-based learning tasks and discussion of current issues.

Assessment Methods in Alignment with Intended Learning Outcomes	Specific assessment methods/tasks	% weighting	Intended subject learning outcomes to be assessed (Please tick as appropriate)

	Examination	0%					
	Total	100%					
	Explanation of the appropriateness of the assessment methods in assessing the intended learning outcomes: The creative projects include individual and group assignments on activewear and swimwear design. Students' comprehension of relationships between design, pattern, materials and construction methods used in products commercially available will be assessed via a group project; while students' ability to produce a creative outfit from design to patternmaking and sample construction will be assessed via an individual project. Students' professionalism, including communication skills and punctuality, will be assessed via presentations, attendance and participation in class.						
Student Study Effort Expected	Class contact:						
	• Lecture						12 Hrs.
	• Studio						15 Hrs.
	• Laboratory						12 Hrs.
	Other student study effort:						
	• Assignments						67 Hrs.
	Total student study effort						106 Hrs.
