

Subject Description Form

Subject Code	SFT5104
Subject Title	Capstone Project of Sustainability
Credit Value	9
Level	5
Pre-requisite/ Co-requisite/ Exclusion	Research Methodology (In the programme proposal, this subject is elective. However, students should take it for dissertation. Exemption may be granted to the student taken in other bachelor or master programme)
Objectives	To enable students: • To carry out a practical project independently; • To make integrative linkage among various subjects as well as between learning and their working experience; • To examine a focused topic critically and in-depth on product or process redesign with sustainability concepts and technology; • To demonstrate an understanding of relevant literature in the topic area chosen; • To develop their skills in the use of relevant scientific and analytical methods in the chosen topic; • To demonstrate an ability to set the chosen topic in its wider context, to sustain an argument, and to present conclusions related to real world situation.
Intended Learning Outcomes	Upon completion of the subject, students will be able to: a. Select and apply appropriate knowledge and techniques to either solve problem in a sustainable issue or create/redesign product or process with sustainability concepts and technology; b. Define the objectives, scope and study framework of a practical project in sustainability; c. Choose an appropriate methodology for the project, undertake a systematic process of investigation, analysis, drawing inferences, and identifying limitation as well as further study; d. Present the dissertation report in an orderly and logical form with high accuracy of oral and written expression.
Subject Synopsis/ Indicative Syllabus	Students work individually on a project topic related to sustainable in fashion or innovation. An academic supervisor, who is a member of academic staff, will provide students guidance on topic, literature review, methodology and project management. Students are allowed to seek an industrial supervisor, who is from the industry with the approval of academic supervisor, to provide students practical advice on the study topic. The academic supervisor will monitor progress of the project. There are four elements in the completion of the dissertation: Project proposal – a plan with title, objectives, scope, brief literature review, sustainable related issue, study framework, methodology, methods of investigation and a time schedule for the work; Progress – students are encouraged to seek advice from supervisors in academic and industry. Academic supervisor shall assess the progress of

	the student’s work. The student is needed to provide evidence of effort and thoughtfulness in the overall planning, investigational work as well as analysis of findings during different stages of the project. <u>Oral examination</u> Examiners will hold viva voce examination and the student has to present his/her research findings. The main purpose of the presentation is to satisfy the examiners that the student’s work is his/her own. During the oral examination, the student has to answer queries related to the dissertation satisfactorily. <u>Written report</u> The examiners will assess the final report mainly based on the extent to which the objectives of the study have been met, as well as the overall quality of the written presentation.																																																						
Teaching/Learning Methodology	Students have to do the project individually. They have to submit an initial dissertation proposal and will be assigned a project supervisor. Thereafter, the student has to work closely with the supervisor in refining the proposal and carrying out investigational work in line with selected and approved methodology. Continued interactions between the student and supervisor are essential to maintain and ensure satisfactory progress of the project.																																																						
Assessment Methods in Alignment with Intended Learning Outcomes	<table><tr><th rowspan="2">Specific assessment methods/tasks</th><th rowspan="2">% weighting</th><th colspan="6">Intended subject learning outcomes to be assessed (Please tick as appropriate)</th></tr><tr><th>a</th><th>b</th><th>c</th><th>d</th><th></th><th></th></tr><tr><td>1. Written report (supervisor and second examiner)</td><td>40%</td><td></td><td></td><td>☐</td><td>☐</td><td></td><td></td></tr><tr><td>Total</td><td>100 %</td><td colspan="6"></td></tr></table> Explanation of the appropriateness of the assessment methods in assessing the intended learning outcomes: It is a dissertation where students need to demonstrate their professional knowledge in addressing the identified issues of their selected topic about sustainable in fashion or innovation. There are three stages of the assessment. In the first stage, students are required to design and defend a dissertation proposal. They progress to collect and analyse data and information for a systematic investigation of the topic at the second stage under academic and/or industry supervision of the advisor(s). In the final stage, students need to submit a dissertation report and attend an oral examination. <i>To pass this subject, students are required to obtain Grade D or above in the Continuous Assessment.</i>	Specific assessment methods/tasks	% weighting	Intended subject learning outcomes to be assessed (Please tick as appropriate)						a	b	c	d			1. Student Study Effort Expected	Class contact:	
	▪ Meeting and discussion with supervisor(s)	30 Hrs.
	Other student study effort:	
	▪ Self-studies	285 Hrs.
	Total student study effort	315 Hrs.
