

The Hong Kong Polytechnic University

Subject Description Form

Please read the notes at the end of the table carefully before completing the form.

Subject Code	SFT549CP
Subject Title	Research Project
Credit Value	9
Level	5
Pre-requisite/ Co-requisite/ Exclusion	Student must successfully complete at least 9 credits of subjects *Special notes to students: Consent of the Project Supervisor and endorsement of the Dissertation Coordinator should be obtained BEFORE subject registration.
Objectives	To develop analytical and research skills to incorporate evidence-based practice in the industry of intelligent wearable technology.
Intended Learning Outcomes <i>(Note 1)</i>	Upon completion of the subject, students will be able to: - demonstrate an understanding of relevant literature in the topic area selected; - pursue an in-depth examination of a selected topic area of interest; - demonstrate an ability to set the topic in its wider context, to sustain an argument, and to present conclusions related to practice implications; - make integrative linkages between theoretical concepts and practical experience; - develop critical thinking and analytic evaluation skills through planning and implementing a research project, and evaluating the outcome in a systematic way and to a professional standard.
Subject Synopsis/ Indicative Syllabus <i>(Note 2)</i>	There is no set syllabus for the dissertation. The student may select, plan and conduct a research project relating to any area in intelligent wearable technology, subject to the availability of supervisors and their research interests and background. The research area should be in line with the student's overall design of his/her chosen programme of study and choice of subjects.
Teaching/Learning Methodology <i>(Note 3)</i>	A topic for research will be mutually agreed upon between the student and the supervisor. The student will read widely on scientific issues and, in specific areas, also in depth under the guidance of the supervisor. Students may be arranged into small groups and share their information in presentations.

	Teaching/Learning Methodology	Intended Subject Learning Outcomes						
		a	b	c	d	e		
	Guided Study	✓	✓	✓	✓	✓		
	Presentation	✓	✓	✓	✓	✓		
Assessment Methods in Alignment with Intended Learning Outcomes <i>(Note 4)</i>	Specific assessment methods/tasks	% weighting	Intended subject learning outcomes to be assessed (Please tick as appropriate)					
			a	b	c	d	e	
	1. Progress	20%	✓	✓				
	2. Report	50%			✓	✓	✓	
	3. Oral Presentation	30%	✓		✓	✓	✓	
	Total	100 %						
	Explanation of the appropriateness of the assessment methods in assessing the intended learning outcomes:							
	Progress will be conducted through regular meetings with the supervisors.							
	The assessment panel will jointly allocate a grade guided by the above weightings which may vary depending on the nature of the project. Individual awards may modify key items and the recommended weightings according to the needs of each award.							
	The dissertation must reflect sufficient evidence of independent work to justify the award at the Master's level, and, preferably be job and profession related. It must be a topic related to the programme area of study in which the student is enrolled. As there is no single universal definition of what constitutes a Master's dissertation, the Dissertation Assessment Panel has the responsibility to decide whether the dissertation reaches the necessary level.							
The dissertation must satisfy the Dissertation Assessment Panel in the following:								
- adequate knowledge of the chosen research topic; - understanding of the issues and developments in the research topic; - mastery of research procedures and design, techniques of data collection; - mastery of appropriate analytical procedures and appropriate interpretation; and - evidence of scientific validity.								
The materials submitted for this assessment must be the student's own work. The submitted work may not be accepted for the purpose of assessment if its								

	authenticity is questionable. Submitting GenAI-generated materials as students' own work or part of their work is an act of academic dishonesty. Students who are found committing academic dishonesty will face disciplinary actions.	
Student Study Effort Expected	Class contact:	
	▪ Tutorial	21 Hrs.
	▪ Progress presentations and seminars	3 Hrs.
	Other student study effort:	
	▪ Literature review, research methodology, data collection, data analysis, preparation of presentation and report	354 Hrs.
	Total student study effort	378 Hrs.

Note 1: Intended Learning Outcomes

Intended learning outcomes should state what students should be able to do or attain upon subject completion. Subject outcomes are expected to contribute to the attainment of the overall programme outcomes.

Note 2: Subject Synopsis/Indicative Syllabus

The syllabus should adequately address the intended learning outcomes. At the same time, overcrowding of the syllabus should be avoided.

Note 3: Teaching/Learning Methodology

This section should include a brief description of the teaching and learning methods to be employed to facilitate learning, and a justification of how the methods are aligned with the intended learning outcomes of the subject.

Note 4: Assessment Method

This section should include the assessment method(s) to be used and its relative weighting, and indicate which of the subject intended learning outcomes that each method is intended to assess. It should also provide a brief explanation of the appropriateness of the assessment methods in assessing the intended learning outcomes.
